CS432/532 Project 1-Page Proposal

1. Team members (in alphabetical order of the last name):

2. What problem you want to work on?

3. Which NoSQL database you want to use?

4. What data will you use (if you use a public data set)? If you want to generate your own data briefly explain why it is the best way. For example, you can say there is no existing public data set (make sure it's true).

5. Why is it an important/interesting problem?

6. Why is it significant (non-trivial)?

7. Why is it doable in this semester? (Describe your plan, strength, familiarity with the language/tool of your choice, etc.)
